Introduction

This is a survey of bus passengers' journey experiences.

It was carried out between mid-March and mid-May 2015.

Number of responses received for West Midlands area-wide sample was 1554.

Results are representative at West Midlands authority level.

Further detail on method is provided in the final two slides of this presentation.

Further detail (1)

Overview of methodology

The survey has been designed to provide results that are representative of bus passenger journeys made within each area, that is at the level of a transport authority or a designated operator area.

The sampling method is 'systematic', derived from the list of the area's bus services and the times that they run (sourced from ITO World Ltd which makes available the data used on Traveline). The bus service/start times selected from the sampling process formed the start point for a three-hour shift, during which field workers made as many return trips as possible on that selected service. They discussed the survey with the boarders of that bus service and gave all passengers the chance to participate; those wishing to do so were given a self-completion questionnaire to complete after their journey, together with a reply-paid envelope.

Fieldwork was conducted between mid-March and mid-May 2015 (excluding the Easter holiday period). Services available for selection were those running between 6am to 10pm, seven days of the week; only school bus services were systematically excluded. The survey was conducted among passengers aged 16 or over.

The response data were weighted in two stages. The first stage was to weight to the age and gender profile of bus passengers within each area; as there is no available data at area level on the age/gender profile of passengers this was estimated by recording the profile of passengers on two occasions during each fieldwork shift. The second stage of weighting was at area level to ensure that in the final data each participating area (within the survey) was represented in proportion to its total annual journey volumes.

Transport Focus was supported by BDRC Continental Ltd in conducting the spring 2015 survey.

Further detail (2)

Interpreting results

Throughout the report, behavioural results are based on all survey respondents, and passengers' opinion ratings are based on those respondents that gave an opinion. All results are based on weighted values. In the report where numbers in brackets shown after the question/category text are the actual numbers of passenger responses generating the answer value shown.

For ease of use BPS data are reported rounded to whole numbers, that is without decimal places. Note: 'all satisfied' results are the sum of the 'very satisfied' and 'fairly satisfied' and calculated on the underlying values which include decimal places. As a consequence these true summations can appear up to one per cent different to the sum of the individual rounded 'very satisfied' and 'fairly satisfied' numbers.

Percentages quoted at 'grouped area' level that is: PTEs; Unitary authorities; or Two-Tier authorities, are the aggregate scores achieved across all the areas surveyed in that group. Each individual area counts towards the area group aggregate score in proportion to the number of passenger journeys made annually in that area.
