

Journey satisfaction during Covid-19

3 September 2021

Journey satisfaction data

The charts in this report show the degree to which those making journeys in the last seven days prior to responding to the survey are satisfied with various aspects of their experience*.

The data shown is a mix of an aggregated three-wave rolling average and individual weekly satisfaction scores where 100 respondents or more have used a single mode in the last seven days. Results show this data, where base sizes are as indicated, for each of the last twelve survey waves.

The table on the following page describes this aggregation.

The number of interviews on which each data point is based is shown on tables at the end of this summary report.
